

Wire safety solutions that take the pressure off

Hose restraints, cable
stockings and cam buckles.

We go above and
beyond to deliver solutions
you can rely on

A business built on keeping people safe

At Wire Aid, we create specialised wire safety products for all kinds of industries, all over the world. Our hose restraints, cable stockings and cam buckles are manufactured in Australia and get sent across the globe. You can find our products in use anywhere from a mine site in the Pilbara to a renewable energy company in Scandinavia.

We were founded in 2007 by Carl Sorensen and Director Adrian Marlow. Together they built Wire Aid on their shared passion for keeping people safe. Our business combines Carl's product and industry knowledge with Adrian's many years of managerial and health and safety experience.

Under Adrian's leadership, we continue to value the importance of safety in everything we do. We're always looking for ways to manufacture and deliver the best possible product, determined to push the limits and stay ahead of the curve.

Our values

We deliver on our promises

Businesses all over the world rely on our safety products.

We think outside the box

Our customised solutions overcome unique challenges.

We're upfront with each other

Every step of the way, we communicate openly and honestly.

We're in this together

Our products keep workers safe in high-risk situations.

The Wire Aid way

Above and beyond

Our team always goes above and beyond to deliver reliable safety solutions. We are ISO 9001 certified for quality management systems and hold ourselves to the highest standards across every part of our service. Driven to exceed expectations, we're always growing our workforce and optimising our processes to build even more capacity and agility.

Backed by experience

Our business is backed by more than 30 years' experience. Carl Sorensen manufactured wire safety products for the construction and rigging industries in the 1980s and led the redesign of the wire hose restraint in the early 2000s. Ever since, our specialists have continued to build and expand on Carl's knowledge, determined to maintain our position as a global industry leader.

Ahead of the curve

We continually pursue new opportunities for wire safety products. We work hard to stay ahead of the curve, investing heavily in ongoing product development and market research. Every product we manufacture is fully tested and traceable. We use sonar precision laser technology to tag each item with a serial number that corresponds to comprehensive product records.

Industries we specialise in

We manufacture and supply wire safety products to businesses all over the globe. From a cable stocking for electrical wires to a hose restraint for drilling equipment, we provide solutions for a wide variety of applications.

Mining

Restrain high pressure hoses on mine site equipment and effectively handle cables.

Oil & Gas

Safely handle drill rig equipment, electrical cables, crane ropes and more.

Utilities

Secure cables and equipment on utilities and telecommunications projects.

High Pressure Water Jetting

Prevent injury on a wide range of works, from industrial cleaning to concrete demolition.

Defence

Restrain, support and secure valuable equipment used in military and naval applications.

Renewable Energy

Support the generation of wave, tidal, wind and solar energy on offshore and onshore projects.

Agriculture

Protect agricultural equipment, restrain high pressure hoses and manage cables.

Construction

Prevent damage to plant, personnel and other equipment on construction sites.

Product Range

Our wire safety products are manufactured from the highest grade of Korean steel. Every product we supply is handwoven by our specialist team and permanently laser engraved with a serial number for tracking and traceability. We keep everything in-house to maintain our quality standards and control production timelines.

Hose Restraints

Hose restraints contain the whipping from high pressure hose failure, significantly reducing the risk of workplace injury. We manufacture stocking type hose restraints with a woven helical design. The plait configuration has more surface contact with the hose, providing optimal grip and safety. Depending on the application, we may supply a restraint made from Kevlar®, galvanised or high-grade stainless steel.

Cable Stockings

We supply a range of cable stocking styles for use in different working environments. Our cable stockings are designed to securely grip bare cables when there is no end fitting and are an incredibly efficient way to support or pull a variety of cables. We manufacture our cable stockings from either Kevlar®, galvanised or high-grade stainless steel to suit the application.

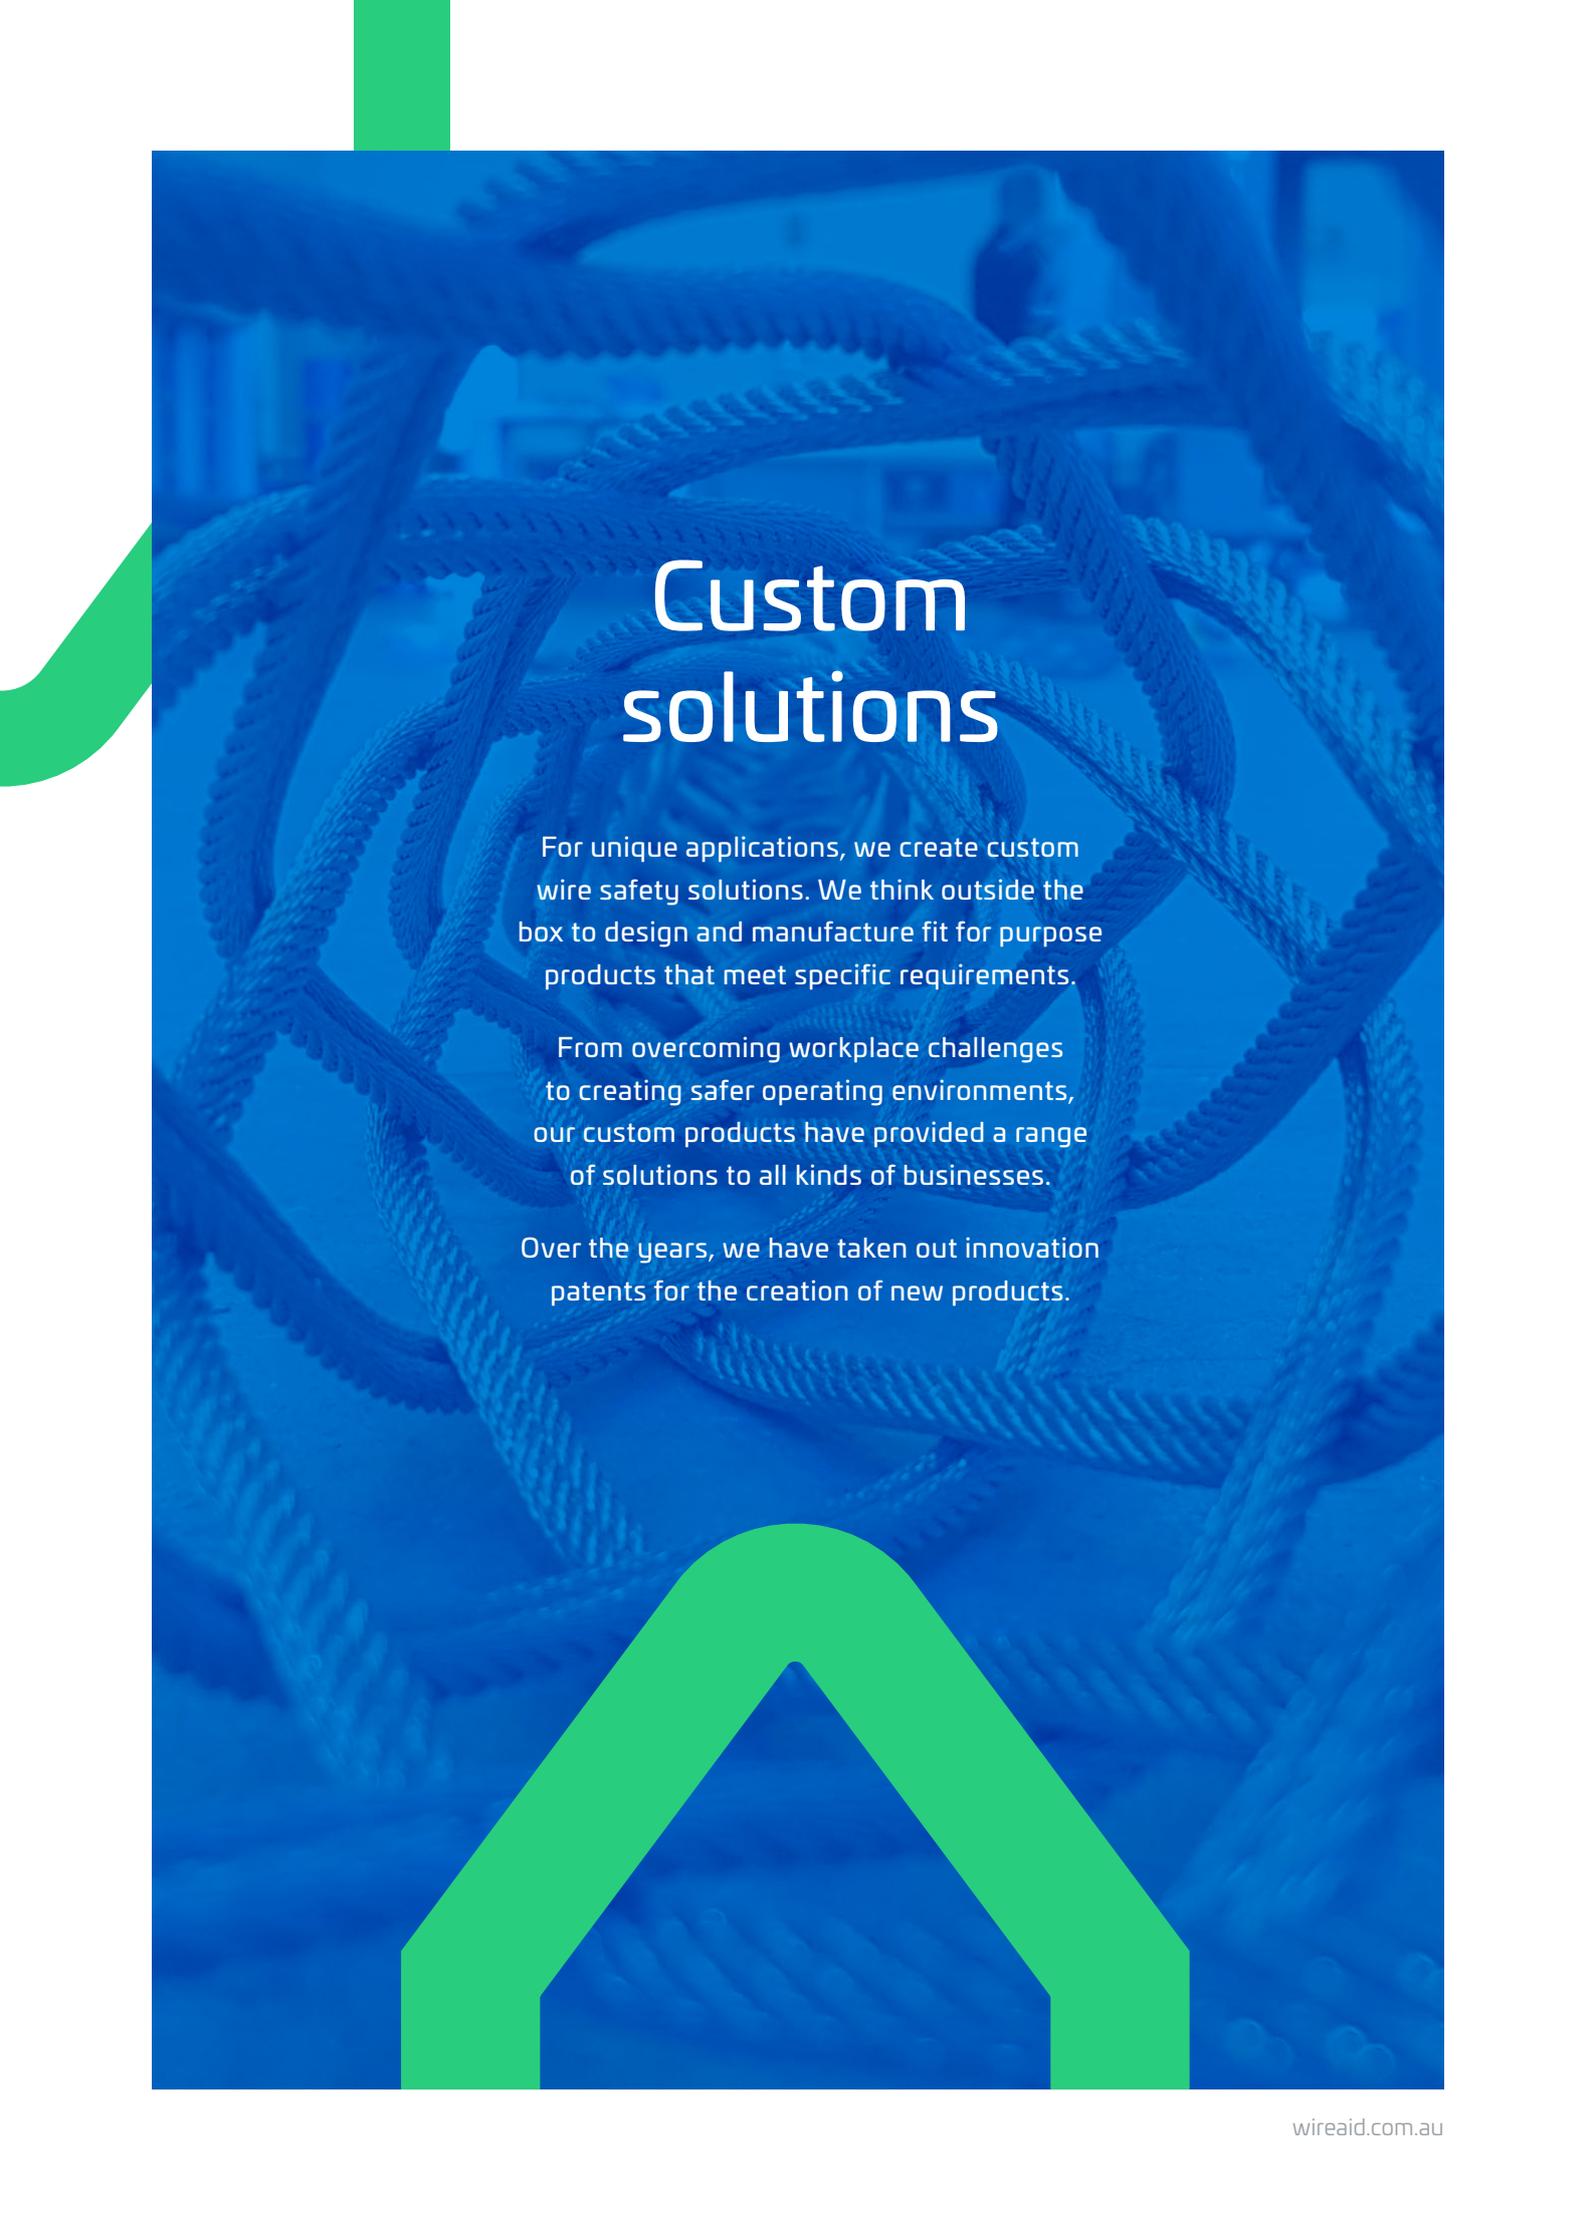

Cam Buckles

We supply zinc alloy self-closing cam buckles with 25mm wide straps in 6 standard lengths. Made to measure cam buckles are provided for special requirements. Also known as hose straps, our cam buckles are sewn and assembled to meet Australian standards. We supply fire retardant anti-static (FRAS) and polyester products for different applications. High vis polyester is available for high-risk industries.

Other Products & Components

We supply specialist tools to aid product use and on-site installation. Our range includes multi-head swaging tools, shackles and wire cutters. We also supply a range of components, with large quantities of ferrules, thimbles, wire, buckles and HPA hose pros on hand at all times. With our significant buying power and storage capacity, we provide components at highly competitive prices, delivering worldwide.

Custom solutions

For unique applications, we create custom wire safety solutions. We think outside the box to design and manufacture fit for purpose products that meet specific requirements.

From overcoming workplace challenges to creating safer operating environments, our custom products have provided a range of solutions to all kinds of businesses.

Over the years, we have taken out innovation patents for the creation of new products.
